WHO ARE WE?

GMV (**www.gmv.com**) is a privately-owned technological enterprise group with an international presence employing more than 1,100 staff. Founded in 1984, GMV mainly operates for both public and private organizations in eight large sectors: Aeronautics, Space, Defense, Health, Security, Transportation, Telecommunications and Information Technologies.

We recruit and hire the most outstanding engineers, and encourage innovation, technical excellence and continuing education. Our engineers regularly present papers at technical conferences, continue their education and we reinvest more than 12% of our budget in R&D projects. This striving for excellence, innovation and flexibility is a major part of our culture. We provide very competitive compensation, attractive benefits, and a great work environment with lots of opportunities for professional growth.

Currently GMV is seeking:

Security Engineering Consultancy Support

We are looking for an engineer to work in Darmastadt, Germany. The tasks for the security engineers of this work package include without being limited to all the following:

1. Security-related anomaly investigation and processing.

2. Security engineering activities:

- Setup and running of asset discovery and vulnerability scans, in coordination with asset owners, as well as analysis of the results

- Reporting anomalies where needed e.g. due to an identified vulnerability;

- Monitoring of vulnerability patching activities across the organization;

- Daily review of user-reported anomalies for possible security impact or implications;

- Daily review of reports generated by firewalls and threat prevention solutions;

- Performing auditing activities e.g.

- Inspections of privileged access and change implementation

- Inspection of deliveries for compliance to security requirements

- Maintenance of security deployments

3. Generation of reports:

- Weekly vulnerability reports

- Weekly patch-status reports

- Regression testing

- Identification of improvements and opportunities:

- Review of proposed changes for compliance to security requirements

- Review and evolution of security requirements

- Setup and maintenance of new security Solutions

Requirements:

- Academic degree: IT Bachelor or Master's degree

- Level of English: Advanced

- Technical knowledge: Information Security

What do we offer?

We offer an attractive remuneration package and also participation in various international projects.

If you are willing to work in an interesting, fast-paced, challenging, diverse and global company that is growing rapidly, please send us your CV in English and your academic transcript.
